

Creamsource Doppio+ Daylight High CRI Essential Kit

Outsight Creamsource Doppio+ Daylight LED
Panel 1x2

Reference: K-CS-2-D-ESS
EAN13: -

Creamsource is a High Power LED luminaire designed for the Film and Television industries. Equally comfortable on location or in the studio, Creamsource is a truly versatile lighting tool.

A large output area creates the unique quality of 'wrapping' your subject in soft light, while the powerful LED engine provides intensity and throw to rival a Small HMI fixture. Only Creamsource can provide this mix of light properties in such a compact form factor.

Precision optics provide a consistent beam with naturally soft edges, while a wide selection of light control tools are available to shape and cut the beam to achieve exactly the look you require.

Built in special effects including Strobe, Lightning and Timed Flash can be synchronised to camera shutter for advanced control.

With exceptional build quality, it has been engineered for years of reliable service. Little wonder Creamsource is becoming an industry standard for lighting professionals around the world.
