

# Manuel Pantograph

Manuel pantograph is a modified version of the standard device for carrying and powering studio lighting.

Reference: RPF 2100  
EAN13: -

The construction of our pantograph consists of two-sided scissors and stationary housing of the drive unit. The pantograph scissors end with a mechanical connector for the reflector spigot, with a power supply box. In the drive housing, there is a gearbox with a steering bell and a mechanism with drums on which the cables pull in one row. The cables end up on the clamp of the mechanical connector for the spigot.
