

## Diffusion Plate

Diffusion Plate

Reference: 02-02-02-01

EAN13: -

The Diffusion Plate softens the light with very little loss (about 8%, less than one eighth of a stop). The beam is spread approximately by 10°. Thus the combination of 60° Optic and 10° Diffusion Plate results in an approximately 70° beam angle. It is made of unbreakable polycarbonate, and fastened to the slot on the front of the fixture.
